*Allowance*

1. Claims 1,2,7-19, 24-37 and 42-52 are allowed.
2. The following is an examiners statement of reasons for allowance:

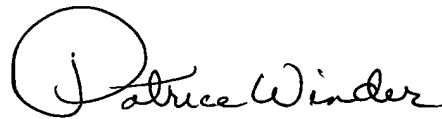

The prior art references most closely resembling the Applicant's claimed invention was, Moiin (6,108,699), Frank et al. (U.S. 6,532,494), Bertin et al (6,400,0681).

First Moiin disclosed a technique for modifying membership in a clustered distributed computer system and updating system configuration. In Moiin each node receiving a reconfiguration message, which is referred to as a petitioned node, determines all other nodes which node the node is connected to and responds with a reconfiguration message which proposes a respective new cluster including all such nodes. However Moiin failed to disclosed, "upon receiving a configuration request at one node of the plurality nodes, entering a quiescent state at the one node. Wherein the one node remains in a quiescent state for a predetermined of time sufficient to allow at least one other node of the plurality of nodes to also enter a quiescent state". Second Bertin disclosed a technique for minimizing the connection set up time in high speed packet switching networks. However fails to disclose, "upon receiving a configuration request at one node of the plurality nodes, entering a quiescent state at the one node. Wherein the one node remains in a quiescent state for a predetermined of time sufficient to allow at least one other node of the plurality of nodes to also enter a quiescent state".
